Create a Restaurant project where anyone can see products with images, product title, product id, description. There must be a navigation from where the user can go from one page to another.

1. Make a project name restaurant and create two apps named meal, about_us inside it. - (Marks 10)
2. Make a bootstrap navigation bar where there will be Home, Show Item, About Us menu, you must use the URL tag in the template and also give a URL name in urls.py - (Marks 10)
3. Create templates folder globally and create base.html inside it and add bootstrap inside base.html that will be inherited by the template inside the app's folder. You must use at least one block tag inside the base.html. - (Marks 15)
4. Create a static folder inside the app folder and outer project folder also. Add some custom CSS files and images inside it. In the home page just show a simple static image with some text. (Marks 10)
5. Create a templates folder inside the app folder and create an index.html file inside it. Now from the meal app's views.py pass the above dictionary to the template and show the data in bootstrap card in your own style. Use truncate word filters and limit the word to 10 on the Show Item page. bootstrap card: <https://getbootstrap.com/docs/5.0/components/card/> (Marks - 25)
6. Give an ideal name of your restaurant project and create an About Page where you can design and place content in your own style. There must be at least one static image - (Marks 10)
